

RESTYLANE® POST-TREATMENT PATIENT INFORMATION

After your treatment, you might have some redness and swelling. This will normally last less than seven days. Cold compresses may be used immediately after treatment to reduce swelling. If the inconvenience continues beyond seven days or if other reactions occur, please contact Medicus Veincare.

- Avoid touching the treated area within six hours following treatment. After that, the area can be gently washed.
- Sunbathing and cold outdoor activities should be avoided until any redness or swelling disappear.
- If you have previously suffered from facial cold sores, there is a risk that the needle punctures could contribute to another recurrence. Speak to your physician about medications that may minimize a recurrence.
- Avoid exercise and alcohol for six hours after treatment.
- Having a follow-up treatment before the product has fully dissipated may enhance the lasting effect. Please be sure to consult your provider about recommendations for touch-up or follow-up treatments
- One week prior to your next treatment with Restylane®; avoid taking St. John's Wort, high doses of Vitamin E supplements, aspirin, and other non-steroidal anti-inflammatory medications, such as ibuprofen. These agents may increase bruising and bleeding at the injection site.*
